 **Dataset Overview**
Pima Indians Diabetes Dataset contains 768 observations and 9 variables. The target variable, Outcome, indicates whether a patient has diabetes.

Sum of DiabetesPedigreeFunction, Sum of Insulin and Sum of BMI by Insulin Bin

Glucose	DiabetesPedigreeFunction	Ins
194	0.13	
187	1.03	
189	0.44	
189	0.40	
187	0.25	
180	2.42	
187	0.41	

- Higher insulin variability among diabetic individuals
- Strong hereditary influence (higher DPF)
- Combined indicators improve prediction accuracy
- Risk score identifies high-risk populations
